

Seamless circular steel tubes for mechanical and general engineering purposes — Technical delivery conditions —

Part 1: Non-alloy and alloy steel tubes

The European Standard EN 10297-1:2003 has the status of a
British Standard

ICS 77.140.75

National foreword

This British Standard is the official English language version of EN 10297-1:2003. It supersedes BS 6323-3:1982 which is withdrawn. Together with BS EN 10305-1, BS EN 10305-2, BS EN 10305-3, BS EN 10305-4, BS EN 10305-5 and BS EN 10305-6, BS EN 10296-1 and BS EN 10296-2, it will also supersede BS 6323-1:1982, which will be withdrawn upon publication of all the standards in the series.

The UK participation in its preparation was entrusted to Technical Committee ISE/8, Steel pipes, which has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep the UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this committee can be obtained on request to its secretary.

Cross-references

The British Standards which implement international or European publications referred to in this document may be found in the BSI Catalogue under the section entitled "International Standards Correspondence Index", or by using the "Search" facility of the *BSI Electronic Catalogue* or of British Standards Online.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, the EN title page, pages 2 to 43 and a back cover.

The BSI copyright date displayed in this document indicates when the document was last issued.

legierten Stählen

This European Standard was approved by CEN on 16 October 2002.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Slovakia, Spain, Sweden, Switzerland and United Kingdom.

Botop Steel

Foreword

This document (EN 10297-1:2003) has been prepared by Technical Committee ECISS /TC 29, "Steel tubes and fittings for steel tubes" the secretariat of which is held by UNI.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by August 2003, and conflicting national standards shall be withdrawn at the latest by August 2003.

In this European Standard the annexes A, C, D and E are normative and annex B is informative.

Another Part of EN 10297 in course of preparation is :

— Part 2 : *Stainless steel tubes*

Another European Standard series covering welded tubes for mechanical and general engineering purposes is currently being prepared.

prEN 10296, *Welded circular steel tubes for mechanical and general engineering purposes — Technical delivery conditions*.

Other European Standard series being prepared in this area are prEN 10294 for hollow bars for machining and prEN 10305 for steel tubes for precision applications.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Slovakia, Spain, Sweden, Switzerland and the United Kingdom.

1 Scope

This Part of EN 10297 specifies the technical delivery conditions for seamless circular tubes made of non-alloy and alloy steels for mechanical and general engineering purposes.

2 Normative references

This European Standard incorporates by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this European Standard only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies (including amendments).

EN ISO 6508-1:1999, *Metallic materials - Rockwell hardness test — Part 1 : Test method (scales A, B, C, D, E, F, G, H, K, N, T) (ISO 6508-1:1999).*

EURONORM 103, *Micrograph determination of the ferritic or austenitic grain size of steels.*

3 Terms and definitions

For the purposes of this European Standard, the terms and definitions given in EN 10020, EN 10021, EN 10052 and prEN 10266 and the following terms and definitions apply.

3.1 fine grain steel

steel having an austenitic/ferritic grain size equal to or finer than 6 when measured in accordance with EURONORM 103

3.2 normalizing rolling

a rolling process in which the final deformation is carried out in a certain temperature range leading to a material condition equivalent to that obtained after normalizing so that the specified values of the mechanical properties are retained even after normalizing (+N)

NOTE Delivery condition of tubes manufactured by a normalizing rolling process or normalized by heat treatment in a furnace are both identified with the same symbol.

3.3 as rolled

formed after heating into the austenitic region (i.e. above AC 3) without subsequent heat treatment (+AR)

3.4 annealing

heat treatment at a temperature slightly below AC 1 (+A)

3.5 TH treatment

heat treatment with the object of achieving a hardness within a specified range (+TH)

3.6 FP treatment

heat treatment with the object of producing a ferritic and pearlitic structure and achieving a hardness within a specified range (+FP)

3.7 employer

organization for which the person works on a regular basis

NOTE The employer may be either the tube manufacturer or a third party organization providing non-destructive testing (NDT) services.

4 Symbols

See prEN 10266 and CR 10260.

5 Classification and designation

5.1 Classification

In accordance with EN 10020 the grades in Tables 3, 4, 5, 6 and A1 are classified as given in Table 1.

5.2 Designation

For tubes covered by this Part of this European Standard the steel designation consists of:

— the number of this Part of this European Standard (EN 10297-1) ;

plus either :

— the steel name in accordance with EN 10027-1 and CR 10260 ;

or

— the steel number allocated in accordance with EN 10027-2.

These are given in Table 1.

Botop Steel

Table 1 — Classification of steel grades and delivery condition

Steel grade		Normal delivery condition ^a	Classification in accordance with EN 10020
Steel name	Steel number		
E235	1.0308	+AR	Non-alloy quality steel
E275	1.0225	or	
E315	1.0236	+N	
E355	1.0580		
E470	1.0536	+AR	
E275K2	1.0456	+N	
E420J2	1.0599		Alloy quality steel
E355K2	1.0920		
E460K2	1.8891	+N	Alloy special steel
E590K2	1.0644	+QT	Non-alloy special steel
E730K2	1.8893	+QT	Alloy special steel
C22E	1.1151	+N or +QT	Non-alloy special steel

C45E	1.1191		
C60E	1.1221		
38Mn6	1.1127		
41Cr4	1.7035	+QT	Alloy special steel
25CrMo4	1.7218		
30CrMo4	1.7216		
34CrMo4	1.7220		
42CrMo4	1.7225		
36CrNiMo4	1.6511		
30CrNiMo8	1.6580		
41NiCrMo7-3-2	1.6563		
C10E	1.1121	+A, +TH, +FP, +N	Non-alloy special steel
C15E	1.1141		
C15R	1.1140		
16MnCr5	1.7131		
16MnCrS5	1.7139		Alloy special steel
20NiCrMo2-2	1.6523		
20NiCrMoS2-2	1.6526		

^a At the discretion of the manufacturer, the tube may be cold finished. The tube shall then be annealed or normalized, to achieve the required properties.

6 Information to be supplied by the purchaser

6.1 Mandatory information

The following information shall be supplied by the purchaser at the time of enquiry and order :

- 1) the quantity (mass or total length or number);
- 2) the term "tube";

- 3) the dimensions (outside diameter, wall thickness) (see 8.9.1);
- 4) the designation according to this Part of this European Standard (see 5.2);
- 5) the delivery condition (see 7.3.1).

6.2 Options

A number of options are specified in this Part of this European Standard, and are listed as follows with appropriate clause references. In the event that the purchaser does not indicate his wish to implement any of these options at the time of enquiry and order the tube shall be supplied in accordance with the basic specification (See 6.1).

- 1) Descaling (see 7.3.1);
- 2) tensile test on sample in condition +N (see 8.3.2);
- 3) tensile test on sample in condition +QT (see 8.3.3);
- 4) tensile test (see 8.3.4);
- 5) impact energy values of Table 13 (see 8.3.5);
- 6) hardness range (see 8.4.2);
- 7) hardness test (see 8.4.3);
- 8) hardenability requirements of Annex D (see 8.5);
- 9) verification of hardenability (see 8.5);
- 10) verification of hardenability by test (see 8.5);
- 11) non-destructive testing (see 8.6.2);
- 12) leak tightness test (see 8.6.2);
- 13) exact lengths (see 8.9.2);
- 14) specific inspection for tubes made of steels from Table 3 (see 9.1);
- 15) inspection document 2.2 (see 9.2.1);
- 16) inspection document 3.1.A, 3.1.C or 3.2 (see 9.2.1);
- 17) hardenability test on a test piece taken from a sample tube (see 11.3);
- 18) supplied tubes shall not contain areas prepared and used for hardness test (see 11.4);
- 19) selection of the leak tightness test method by the purchaser (see 11.5.1);
- 20) coating for transit and storage (see clause 13).

6.3 Example of an order

Twenty five tonnes of tube in accordance with EN 10297-1 with specified outside diameter of 60,3 mm and specified wall thickness of 3,6 mm grade E275 steel in the normalised delivery condition and supplied with specific inspection.

25 t Tube - - 60,3 x 3,6 - EN 10297 - E275 - +N - Option 14

7 Manufacturing process

7.1 Steelmaking process

The steelmaking process is at the discretion of the manufacturer.

Elements not included in Tables 3, 4, 5, 6 and A1 for the relevant grade shall not be intentionally added to the steel without the agreement of the purchaser, except for elements which may be added for finishing the cast. All appropriate measures shall be taken to prevent the addition of undesirable elements from scrap or other materials used in the steelmaking process.

7.2 Deoxidation process

Steels shall be fully killed and additionally those in Tables 4 and 5 shall contain N binding elements and are fine grain steels.

7.3 Tube manufacture and delivery conditions

7.3.1 Tubes shall be manufactured by a seamless process.

Table 2 gives a summary of delivery conditions, hardenability requirements and related mandatory and optional test requirements for mechanical properties and hardness. For hardenability requirements see 8.5.

Tubes made of steels in Table 3 with the exception of E470 are normally supplied as rolled or normalized at the discretion of the manufacturer. However the purchaser may specify +N condition. Grade E470 is supplied as rolled.

Tubes made of steels in Table 4 are supplied in the delivery condition indicated in Table 9.

Tubes made of steels in Tables 5, 6 and A1 are supplied in a delivery condition indicated in Table 2 as specified by the purchaser.

The recommended heat treatment temperatures are given in Table B.1 and Table B.2 as appropriate.

At the manufacturers discretion tube may be cold finished, before the specified heat treatment is given. Cold finished tubes in the +AR condition shall be annealed or normalized to achieve the specified properties.

NOTE The cold drawing process leaves residual oil on the tube which may leave a residue when heat treated.

When specified the tubes shall be supplied descaled (see option 1). The amount of descaling shall be agreed at the time of enquiry and order. The method is at the discretion of the manufacturer.

Option 1 : Tubes shall be supplied descaled.

7.3.2 All NDT activities shall be carried out by qualified and competent level 1, 2 and/or 3 personnel authorised to operate by the employer.

The qualification shall be in accordance with EN 10256 or, at least an equivalent to it.

It is recommended that the level 3 personnel be certified in accordance with EN 473 or, at least an equivalent to it.

The operating authorisation issued by the employer shall be in accordance with a written procedure.

NDT operations shall be authorised by a level 3 NDT individual approved by the employer.

NOTE The definition of level 1, 2 and 3 can be found in appropriate standards, e.g. EN 473 and EN 10256.

Table 2 — Summary of delivery conditions, related options and requirements

Applicable Table(s)	Applicable Table(s)	Delivery condition	Hardenability requirement	Cast analysis	Test requirements ^a

		+AR	Option 8 ^d	M	-	-	-	-	Option 9 or 10	-
		+N	Option 8 ^d	M	Option 4	-	-	-	Option 9 or 10	Option 7
		+A	Option 8 ^d	M	Option 4	-	-	-	Option 9 or 10	M
		+TH ^e	Option 8 ^d	M	Option 4	-	-	-	Option 9 or 10	M
	+FP ^e	Option 8 ^d	Option 8 ^d	M	Option 4	-	-	Option 9 or 10	Option 9 or 10	M

^a M = Mandatory, - = Not applicable.

^b At the manufacturers discretion as rolled or normalized except for grade E 470 which is always supplied in +AR condition.

^c +AR condition only applies for 25CrMo4 and 34CrMo4.

^d Option 8 only applies for alloy special steels.

^e +TH and +FP only apply for 16MnCr5, 16MnCrS5, 20NiCrMo2-2 and 20NiCrMoS2-2.

8 Requirements

8.1 General

Tubes, when supplied in a delivery condition indicated in 7.3.1 and inspected in accordance with clause 9, shall conform to the requirements of this Part of this European Standard.

In addition the general technical delivery requirements specified in EN 10021 apply.

8.2 Chemical composition

The cast analysis reported by the steel producer shall apply and shall conform to the requirements of Tables 3, 4, 5, 6 and Table A.1.

In case of dispute the permissible deviations of a product analysis from the limits on cast analysis specified in Tables 3, 4, 5, 6 and Table A.1 are given in Table 7.

NOTE When welding tubes produced according to this part of EN 10297, account should be taken of the fact that the behaviour of the steel during and after welding is dependent not only on the steel and the delivery condition but also on the conditions of preparing for and carrying out welding. Not all of the steels specified in this standard are able to be welded unless specialised techniques are employed by specialist welders.

8.3 Mechanical properties

8.3.1 For tubes made of steels covered by Tables 3, 4, 5, and 6 the mechanical properties for the relevant delivery condition in Tables 8, 9, 10, 11 and 12 apply.

8.3.2 When specified, for tubes supplied as rolled or annealed in grades of Table 5 the mechanical properties in Table 10 shall apply for a sample submitted to a simulated normalizing treatment (see Option 2).

Option 2 A tensile test shall be carried out on a sample test piece from a sample heat treated to the condition +N and the results reported.

8.3.3 When specified, for tubes supplied normalized in grades of Table 5 and for tubes supplied as rolled or annealed in grades of Table 5 and 6 the mechanical properties in Table 12 shall apply for a sample submitted to a simulated quenched and tempered treatment (see Option 3).

Option 3 A tensile test shall be carried out on a sample test piece from a sample heat treated to the condition +QT and the results reported.

8.3.4 When specified for tubes supplied annealed in grades of Tables 5, 6, and Table A.1 or for tubes supplied in delivery condition +N, +TH or +FP in grades of Table A1 a tensile test shall be carried out and the results reported (see Option 4).

Option 4 A tensile test shall be carried out and the results reported.

8.3.5 When specified for tubes supplied quenched and tempered in grades of Table 5 or 6 except C60E the impact properties, shown in Table 13 shall apply (see Option 5).

Option 5 The impact energy values of Table 13 shall be verified and the results reported.

Botop Steel

30CrNiMo8	1.6580	30	30	20	35	22	45	27
41NiCrMo7-3-2	1.6563	35	40	25	45	27	45	27

NOTE l = longitudinal, t = transverse.

^a only applicable when option 5 is specified (see 8.3.5).

8.4 Hardness requirements

8.4.1 For tubes made of steel grades in Tables 5, 6 and Table A.1 and supplied in the annealed condition and for tube made of steel grades in Table A.1 and supplied in the +TH or +FP condition the hardness requirements in Table C.1 apply.

8.4.2 When Option 6 is specified, for grades of Table 5 and 6 in +QT condition, an agreed hardness range shall apply.

Option 6 An agreed hardness range shall apply and be verified and the results reported (see 11.4).

8.4.3 When Option 7 is specified, for steel grades of Table A1 in +N condition, a hardness test shall be carried out and the results reported.

Option 7 A hardness test shall be carried out and the results reported.

8.5 Hardenability

When Option 8 is specified for steel grades in Tables 5, 6 and for the alloy special steels in Table A.1, the hardenability requirements in Annex D shall apply, except for the +QT condition.

Option 8 Hardenability requirements of Annex D shall apply.

When Option 9 or Option 10 is specified the hardenability shall be verified.

Option 9 Hardenability in accordance with annex D shall be verified at the manufacturers discretion either by calculation or by test in accordance with EN ISO 642 and the results reported.

Option 10 Hardenability shall be verified by a test in accordance with EN ISO 642 and the results reported.

8.6 Appearance and soundness

8.6.1 Appearance

8.6.1.1 The tube shall be free from external and internal surface defects that can be established by visual inspection.

8.6.1.2 The internal and external surface finish of the tubes shall be typical of the manufacturing process and, where applicable, the heat treatment employed. The finish and surface condition shall be such that any surface imperfections requiring dressing can be identified.

8.6.1.3 It shall only be permissible to remove surface imperfections, by grinding or machining, provided that, after so doing the tube thickness in the dressed area is not less than the specified minimum wall thickness. All dressed areas shall blend smoothly into the contour of the tube.

8.6.1.4 Surface imperfections which encroach on the minimum wall thickness shall be considered defects and tubes containing these shall be deemed not to conform to this Part of this European Standard.

8.6.2 Soundness

When Option 11 is specified tubes, supplied with specific inspection and testing shall be subjected to non-destructive testing for imperfections.

Option 11 The full length of the tube shall be non-destructively tested in accordance with 11.6.

When Option 12 is specified, tubes supplied with specific inspection and testing, shall be subjected to a leak tightness test.

Option 12 Leak tightness testing shall be carried out in accordance with 11.5.

8.7 Straightness

The deviation from straightness of tubes with an outside diameter D equal to or greater than 33,7 mm shall not exceed $0,0015 L$ (L = Length of the tube). The deviation from straightness, for tubes with D less than 33,7 mm, is not specified.

NOTE The deviation from straightness for tube with $D < 33,7$ mm is not specified, due to bending during processing and subsequent handling, however tube should be reasonably straight.

8.8 End preparation

Tubes shall be delivered with square cut ends. The ends shall be free from excessive burrs.

8.9 Dimensions, masses, tolerances and sectional properties

8.9.1 Outside diameters, wall thicknesses and masses

Preferred outside diameters and wall thicknesses have been selected from EN 10220 and together with additional diameters are given in Table 14.

The masses for these dimensions are given in EN 10220 or shall be calculated using the formulae in Annex E.

NOTE Dimensions which are not included in Table 14 may be agreed at the time of enquiry and order.

8.9.2 Length

The tubes shall be delivered in random lengths, unless Option 13 is specified. The length range may be agreed at the time of enquiry and order.

Option 13 Exact lengths shall be supplied. The length required shall be specified at the time of enquiry and order.

8.9.3 Tolerances

8.9.3.1 Tolerances on outside diameter (D) and wall thickness (T)

The outside diameter and wall thickness of the tubes shall be within the tolerance limits given in Table 15.

Out of roundness is included in the tolerances on outside diameter and eccentricity is included in the tolerances on thickness.

6 000 < <i>L</i> ≤ 12 000	+15 0
> 12 000	0/+ by agreement

8.9.4 Sectional properties

The nominal sectional properties shall be calculated in accordance with Annex E.

9 Inspection

9.1 Types of inspection

The conformity to the requirements of the order for tubes supplied in accordance with this Part of this European Standard shall be checked by:

- non-specific inspection and testing (see EN 10021) for tubes made of steels available in Table 3 except grade E470, unless Option 14 is specified ;

Option 14 Tubes made of steels in accordance with Table 3 shall be supplied with specific inspection and testing.

- specific inspection and testing (see EN 10021) for tubes made of steel grade E470 and steels in accordance with Tables 4, 5, 6 and Table A.1.

9.2 Inspection documents

9.2.1 Types of inspection documents

The following inspection documents, in accordance with EN 10204, shall be issued :

- certificate of compliance with order 2.1 for tubes supplied with non-specific inspection and testing unless Option 15 is specified ;

Option 15 Inspection document type 2.2 shall be supplied.

- inspection certificate 3.1.B, for tubes supplied with specific inspection and testing unless Option 16 is specified.

Option 16 Inspection document 3.1.A, 3.1.C or 3.2 shall be supplied, the type of document to be specified by the purchaser.

If an inspection document 3.1.A, 3.1.C or 3.2 is specified the purchaser shall notify the manufacturer of the name and address of the organisation or person who is to carry out the inspection and produce the inspection document. In the case of inspection report 3.2 it shall be agreed which party issue the certificate.

9.2.2 Content of inspection documents

The content of the inspection document shall be in accordance with prEN 10168 as shown in 9.2.2.1, 9.2.2.2 and 9.2.2.3.

9.2.2.1 For tubes supplied with non-specified inspection and testing the certificate of compliance with the order shall contain the following codes and information:

- A commercial transactions and parties involved;
- B description of products to which the inspection document applies;
- Z validation.

9.2.2.2 For tubes supplied with non-specific inspection and testing and a test report type 2.2 it shall contain the following codes and information :

- A commercial transactions and parties involved;
- B description of products to which the inspection document applies;
- C02 direction of test pieces;

EN 10297-1:2003 (E)

C10 to C13 tensile test;

C71 to C92 chemical composition;

D01 marking and identification, surface appearance, shape and dimensional properties;

Z validation.

9.2.2.3 For tubes supplied with specific inspection and testing the inspection documents 3.1.A, 3.1.B, 3.1.C, 3.2 shall contain the following codes and information :

A commercial transactions and parties involved ;

B description of products to which the inspection document applies ;

C02 to C03 direction of test pieces and test temperature where applicable ;

C10 to C13 tensile test, if applicable ;

C40 to C43 impact test, if applicable ;

C60 to C69 other tests (e.g. options invoked which require test pieces) ;

C71 to C92 chemical composition ;

D01 marking and identification, surface appearance, shape and dimensional properties ;

D02 to D99 for other tests (e.g. options invoked which do not require test (pieces) ;

Z validation.

9.3 Summary of inspection and testing

Inspection and testing shall be carried out as stated in Table 17.

Table 17 — Summary of inspection and testing

Type of inspection and testing		Non-specific inspection and testing	Specific inspection and testing	Reference paragraph
Mandatory	Cast Analysis	Manufacturers procedure	1/cast	8.2
	Tensile test ^a	Manufacturers procedure	1/test unit	8.3, 11.1
	Impact test ^b	Not applicable	1 set/test unit	8.3, 11.2
	Dimensional inspection	See 11.7		
	Visual examination	See 11.8		
	Material identification of alloy steel tubes	Not applicable	Individual	11.9
Optional	Tensile test on heat treated sample ^c	Not applicable	1/cast	8.3.2, 8.3.3
	Tensile test ^d	Not applicable	1/test unit	8.3.4, 11.1
	Impact test ^e	Not applicable	1 set/test unit	8.3.5, 11.2
	Verification of hardness range	Not applicable	According to documented procedure	8.4.2
	Hardness test	Not applicable	1/test unit	8.4.3, 11.4
	Hardenability test	Not applicable	1/cast	8.5, 11.3
	Non-destructive test for imperfections	Not applicable	individual	8.6.2, 11.6
	Leak tightness test	Not applicable	individual	8.6.2, 11.5
^a	tensile test is not mandatory for steel grades of tables 5 and 6 in the delivery conditions +A and +AR and for steel grades of Table A.1 (see table 2)			
^b	Only for steel grades J2 and K2 in Table 4.			
^c	See Options 2 and 3 and 4 in 8.3.			
^d	See Option 4 in 8.3.			
^e	Only for steel grades under the delivery conditions +QT shown in Table 13.			

10 Sampling

10.1 Frequency of tests

10.1.1 Test Unit

In the case of specific inspection a test unit shall comprise tubes of the same steel grade the same specified dimensions, the same cast, the same manufacturing process and the same delivery condition.

The quantity of tubes per test unit shall conform to Table 18.

10.1.2 Number of sample tubes per test unit

One sample tube shall be taken from each test unit.

Table 18 — Quantity of tubes per test unit

Outside diameter (<i>D</i>) mm	Maximum number of tubes per test unit
$D \leq 114,3$	400
$114,3 < D \leq 323,9$	200
$D > 323,9$	100

10.2 Preparation of samples and test pieces**10.2.1 General**

Samples and test pieces shall be taken at the tube ends and in accordance with the requirements of EN ISO 377.

10.2.2 Test piece for the tensile test

The test piece shall be taken in accordance with the requirements of EN 10002-1.

- For tubes with *D* less than or equal to 219,1 mm, the test piece shall be either a full tube section or a strip section and be taken in a direction longitudinal to the axis of the tube;
- For tubes with *D* greater than 219,1 the test piece is either a machined test piece of circular cross-section from an unflattened sample or a flattened strip section, and shall be taken in a direction either longitudinal or transverse to the axis of the tube.

10.2.3 Test piece for the impact test

The direction of testing is at the discretion of the manufacturer. Flattening of samples is not permitted. Three standard Charpy V-notch test pieces in accordance with EN 10045-1 shall be taken. If the nominal product thickness is such that standard test pieces cannot be produced, the test shall be carried out using test pieces of width less than 10 mm but not less than 5 mm. In all cases, the largest obtainable width shall be used.

Tubes shall not be subject to impact testing where longitudinal test pieces of width 5 mm or greater cannot be obtained.

Test pieces shall be taken and prepared such that the axis of the notch is perpendicular to the surface of the tube.

10.2.4 Test piece for hardenability test (Jominy)

Test pieces shall be prepared in accordance with EN ISO 642.

When a test piece from a thick wall sample tube is used (see Option 17) the axis of the test piece shall be located at a distance of not more than 20 mm from the outside surface.

10.2.5 Test piece for hardness test (Brinell)

Test pieces shall be prepared in accordance with EN ISO 6506-1.

11 Test methods

11.1 Tensile test

The test shall be carried out at room temperature in accordance with EN 10002-1 and the following determined:

- the tensile strength (R_m);
- the upper yield strength (R_{eH});

If a yield phenomenon is not present the 0,2 % proof strength ($R_{p0,2}$) or the 0,5 % proof strength, total extension ($R_{t0,5}$) shall be determined. In case of dispute the 0,2% proof strength ($R_{p0,2}$) shall apply.

- the percentage elongation after fracture with reference to a gauge length of $5,65\sqrt{S_0}$.

If a non-proportional test piece is used, the percentage elongation value shall be converted to the value for a gauge length $L_0 = 5,65\sqrt{S_0}$ using the conversion Tables given in EN ISO 2566-1.

11.2 Impact test

11.2.1 The test shall be carried out in accordance with EN 10045-1. The test temperature shall be - 20°C for mandatory tests and 20 °C for optional tests (see Table 17).

11.2.2 The mean value of the three test pieces shall meet the specified minimum average value given in Tables 9 and 13. One individual value may be below the specified value, provided that it is not less than 70 % of that value.

11.2.3 If the width (W) of the test piece is less than 10 mm, the measured impact energy (KV_p) shall be converted to impact energy (KV_c) using the following equation.

$$KV_c = \frac{10 KV_p}{W} \quad (1)$$

where

KV_c is the calculated impact energy, in joules;

KV_p is the measured impact energy in joules;

W is the width of the test piece in millimetres.

The calculated impact energy KV_c shall conform to the requirements given in 11.2.2.

11.2.4 If the requirements of 11.2.2 are not met, then an additional set of three test pieces may be taken at the discretion of the manufacturer from the same sample and tested. To consider the test unit as conforming, after testing the second set, the following conditions shall be satisfied simultaneously:

- the average value of six tests shall be equal to or greater than the specified minimum value;
- not more than two of six individual values may be lower than the specified minimum value;
- not more than one of the six individual values may be lower than 70 % of the specified value.

11.2.5 The dimensions in millimetres of test pieces, the measured energy values and the average value shall be reported.

11.3 Hardenability test

The test shall be carried out in accordance with EN ISO 642 and EN ISO 6508-1:1999 scale C. The test results reported by the steel producer shall apply unless Option 17 is specified for tubes with wall thickness equal or greater than 35 mm.

Option 17 A hardenability test shall be performed on a test piece taken from a sample tube.

11.4 Hardness test

The test shall be carried out in accordance with EN ISO 6506-1, and $HB_{10/3\ 000}$ be determined.

Except for Option 6 (see 8.4.2), where a documented procedure shall be applied, two hardness indentations shall be made and the average shall constitute the test result.

The indentations shall be :

- on either the adequately prepared outside surface at one end of the sample tube;
- or on any appropriate surface of a sample from the test unit intentionally taken or available from tests.

It is permitted to supply tubes that have been used for a hardness test unless Option 18 is specified.

Option 18 Supplied tubes shall not contain areas that have been prepared and used for hardness tests.

11.5 Leak tightness test

11.5.1 General

The test shall be carried out in accordance with 11.5.2 or 11.5.3. The choice of test method is at the discretion of the manufacturer, unless Option 19 is specified.

Option 19 The test method for verification of leak tightness according to 11.5.2 or 11.5.3 is chosen by the purchaser.

11.5.2 Hydrostatic test

The hydrostatic test shall be carried out at a test pressure of 70 bar or P , calculated from the following equation, whichever is the lower.

$$P = \frac{20 S T}{D} \quad (2)$$

where

- P is the test pressure in bar;
- D is the specified outside diameter (in mm);
- T is the specified wall thickness (in mm);
- S is the stress in MPa corresponding to 70 % of the specified minimum yield strength (see Tables 8, 9, 10, 11 and 12) for the steel grade concerned.

The test pressure shall be held for not less than 5 s for tubes with specified outside diameter less than or equal to 457 mm and for not less than 10s for tubes with specified outside diameter greater than 457 mm.

The tube shall withstand the test without leakage or visible deformation.

NOTE This hydrostatic leak tightness test is not a strength test.

11.5.3 Electromagnetic test

The test shall be carried out in accordance with EN 10246-1.

11.6 Non-destructive testing

Testing shall be carried out in accordance with one of the following non-destructive testing standards to the acceptance level indicated:

- EN 10246-3 - acceptance level E4;
- EN 10246-5 - acceptance level F4;
- EN 10246-7 - acceptance level U4 sub-category C for $T \leq 4$ mm and sub-category D for $T > 4$ mm.

The choice of method is at the discretion of the manufacturer.

11.7 Dimensional inspection

Specified dimensions shall be verified.

A gauge is used normally for measuring the outside diameter, however for tubes with D equal to or greater than 406,4 mm this may be measured using a circumference tape. The wall thickness shall be measured at the tube ends.

11.8 Visual examination

Tubes shall be visually examined for compliance with the requirement of 8.6.1.

11.9 Material identification

Each tube from alloy steel in the Tables 6 and Table A.1 shall be tested to assure that the correct grade is being supplied.

11.10 Retests, sorting and reprocessing

For retests, sorting and reprocessing the requirements of EN 10021 shall apply.

12 Marking

12.1 Except as provided for in 12.2, each tube shall be marked by suitable and durable methods such as painting, stamping, adhesive labels or attached tags with the following:

- the manufacturer's name or trademark;
- the number of this Part of this European Standard (EN 10297-1);
- the steel name, e.g. E275;
- the symbol for the delivery condition, see Table 2, except for the condition +AR for grades in Table 3;
- the symbol +H and the cast number for tubes supplied against a hardenability requirement (see 8.5);

EN 10297-1:2003 (E)

- in the case of specific inspection, the mark of the inspection representative and an identification number (e.g. order or item number) which permits the correlation of the product or delivery unit to the related document.

Example of marking :

X-EN 10297-1 - C15R+FP - Y - Z

X is the manufacturers name or trademark

Y is the mark of inspection representative

Z is the identification number (e.g. order or item number)

12.2 Where the products are supplied bundled, the marking required in 12.1 may be on a label which shall be securely attached to the bundle. Additionally the label or tags shall identify the diameter, wall thickness and type of length of the tube.

13 Protection

The tubes shall be delivered without temporary corrosion protection unless Option 20 is specified.

Option 20 Tubes shall be specially protected for transit and storage. The type of coating shall be agreed at the time of enquiry and order.

Annex E (normative)

Formulae for calculation of nominal section properties

The nominal sectional properties for tubes are calculated from the following geometric properties using the formulae given as follows:

Specified outside diameter	D	(in mm)
Specified thickness	T	(in mm)
Calculated inside diameter	$d = D - 2T$	(in mm)
Superficial area/unit length	$A_s = \frac{\pi D}{10^3}$	(in m ² /m)
Cross sectional area	$A = \frac{\pi(D^2 - d^2)}{4 \cdot 10^2}$	(in cm ²)
Mass per length	$M = 0,785 A$	(in kg/m)
Second moment of area	$I = \frac{\pi(D^4 - d^4)}{64 \cdot 10^4}$	(in cm ⁴)
Radius of gyration	$i = \sqrt{\frac{I}{A}}$	(in cm)
Elastic section modulus	$W_{el} = \frac{2I \cdot 10}{D}$	(in cm ³)
Plastic section modulus	$W_{pl} = \frac{D^3 - d^3}{6 \cdot 10^3}$	(in cm ³)
Torsional Inertia constant (polar moment of inertia)	$I_t = 2I$	(in cm ⁴)
Torsional modulus constant	$C_t = 2W_{el}$	(in cm ³)

Bibliography

EN 10083-1:1991 + A1, *Quenched and tempered steels — Part 1 : Technical delivery conditions for special steels (includes amendment A1:1996)*.

EN 10083-2:1991 + A1:1996, *Quenched and tempered steels — Part 2 : Technical delivery conditions for unalloyed quality steels (includes amendment A1:1996)*..

EN 473, *Non-destructive testing — Qualification and certification of NDT personnel — General principles*.

Botop Steel

BSI — British Standards Institution

BSI is the independent national body responsible for preparing British Standards. It presents the UK view on standards in Europe and at the international level. It is incorporated by Royal Charter.

Revisions

British Standards are updated by amendment or revision. Users of British Standards should make sure that they possess the latest amendments or editions.

It is the constant aim of BSI to improve the quality of our products and services. We would be grateful if anyone finding an inaccuracy or ambiguity while using this British Standard would inform the Secretary of the technical committee responsible, the identity of which can be found on the inside front cover.
Tel: +44 (0)20 8996 9000. Fax: +44 (0)20 8996 7400.

BSI offers members an individual updating service called PLUS which ensures that subscribers automatically receive the latest editions of standards.

Buying standards

Orders for all BSI, international and foreign standards publications should be addressed to Customer Services. Tel: +44 (0)20 8996 9001.
Fax: +44 (0)20 8996 7001. Email: orders@bsi-global.com. Standards are also available from the BSI website at <http://www.bsi-global.com>.

In response to orders for international standards, it is BSI policy to supply the BSI implementation of those that have been published as British Standards, unless otherwise requested.

Information on standards

BSI provides a wide range of information on national, European and international standards through its Library and its Technical Help to Exporters Service. Various BSI electronic information services are also available which give details on all its products and services. Contact the Information Centre.
Tel: +44 (0)20 8996 7111. Fax: +44 (0)20 8996 7048. Email: info@bsi-global.com.

Subscribing members of BSI are kept up to date with standards developments and receive substantial discounts on the purchase price of standards. For details of these and other benefits contact Membership Administration.
Tel: +44 (0)20 8996 7002. Fax: +44 (0)20 8996 7001.
Email: membership@bsi-global.com.

Information regarding online access to British Standards via British Standards Online can be found at <http://www.bsi-global.com/bsonline>.

Further information about BSI is available on the BSI website at <http://www.bsi-global.com>.

Copyright

Copyright subsists in all BSI publications. BSI also holds the copyright, in the UK, of the publications of the international standardization bodies. Except as permitted under the Copyright, Designs and Patents Act 1988 no extract may be reproduced, stored in a retrieval system or transmitted in any form or by any means – electronic, photocopying, recording or otherwise – without prior written permission from BSI.

This does not preclude the free use, in the course of implementing the standard, of necessary details such as symbols, and size, type or grade designations. If these details are to be used for any other purpose than implementation then the prior written permission of BSI must be obtained.

Details and advice can be obtained from the Copyright & Licensing Manager.
