## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 7005-2 was prepared by Technical Committee ISO/TC 5, *Ferrous metal pipes and metallic fittings*.

This part of ISO 7005, together with parts 1 and 3, cancel and replace ISO 2084 : 1974, ISO 2229 : 1973 and ISO 2441 : 1975.

ISO 7005 will consist of the following parts, under the general title *Metallic flanges*:

- Part 1: Steel flanges
- Part 2: Cast iron flanges
- Part 3: Copper alloy and composite flanges
- Part 4: Aluminium and aluminium alloy flanges

Annexes A and B of this part of ISO 7005 are for information only.

## Introduction

Various flange systems based on differing design criteria have been in use throughout the world for many years. Given the increasing difficulties arising from such a situation, this International Standard has been based on a single series of metallic flanges. ISO 7005 will be published in four parts as follows:

- Part 1: Steel flanges
- Part 2: Cast iron flanges
- Part 3: Copper alloy and composite flanges
- Part 4: Aluminium and aluminium alloy flanges

This part of ISO 7005 is based on the American and European cast iron flange systems which have been combined to produce one International Standard with some changes to the dimensions specified in the two systems.

The materials specified in American (ANSI) standards and International Standards have been retained. Because, at this time, the International Standards for cast iron materials do not specify pressure/temperature ( $p/T$ ) ratings, the ratings for the materials specified have been based on those given in comparable national standards.

In the American system, flanges are designated by a Class rating but in this part of ISO 7005 the relevant Class ratings are designated by nominal pressure (PN) ratings. The equivalent designations are as follows:

- Classes 125 and 150: ISO PN20
- Classes 250 and 300: ISO PN50

The ratings used in the European system remain as ISO PN2,5, ISO PN6, ISO PN10, ISO PN16, ISO PN25 and ISO PN40.

ISO PN20 and ISO PN50 grey cast iron and ductile cast iron flanges are designed to be interchangeable with flanges to ANSI B16.1 (grey cast iron) and ANSI B16.42 (ductile cast iron). They are not identical but are deemed to comply with the dimensions specified in ANSI B16.1 and ANSI B16.42 as appropriate (see 2.7).

Flange details in all four parts of ISO 7005 are such that flanges having the same PN and nominal size (DN) values and compatible flange facings will mate together when using metric bolting. Tolerances on dimensions are given for guidance in annex A.

To avoid any possible confusion in giving descriptive names to flanges, all flanges are designated by type numbers and flange facings are designated by a letter.

Users of this part of ISO 7005 should satisfy themselves that the flanges comply with any statutory requirements.

## Metallic flanges —

### Part 2: Cast iron flanges

#### Section 1: General

##### 1.1 Scope

This part of ISO 7005 for a single system of flanges specifies requirements for circular grey, malleable and ductile cast iron flanges in the following nominal pressure ratings:

###### Series 1\*

- ISO PN10
- ISO PN16
- ISO PN20
- ISO PN50

###### Series 2\*

- ISO PN2,5
- ISO PN6
- ISO PN25
- ISO PN40

This part of ISO 7005 specifies the types of flanges and their facings, dimensions, bolt sizes, surface finish of faces, marking, testing, inspection and materials together with associated pressure/temperature ratings.

##### NOTES

1 Attention is drawn to the need to refer to the pressure/temperature rating tables for the permissible working pressures, particularly for flanges of ISO PN20 and ISO PN50.

2 Dimensions of gaskets will be the subject of a future International Standard.

##### 1.2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this part of ISO 7005. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this part of ISO 7005 are encouraged to investigate the possibility of applying the most recent editions

of the standards listed below. Members of IEC and ISO maintain registers of currently valid International Standards.

ISO 185 : 1988, *Classification of grey cast iron*.

ISO 887 : 1983, *Plain washers for metric bolts, screws and nuts — General plan*.

ISO 1083 : 1987, *Spheroidal graphite cast iron — Classification*.

ISO 2531 : 1986, *Ductile iron pipes, fittings and accessories for pressure pipelines*.

ISO 5922 : 1981, *Malleable cast iron*.

ISO 6708 : 1980, *Pipe components — Definition of nominal size*.

ISO 7268 : 1983, *Pipe components — Definition of nominal pressure*.

ASTM A 126 : 1984, *Gray iron castings for valves, flanges, and pipe fittings*.

ASTM A 395 : 1980, *Ferritic ductile iron pressure-retaining castings for use at elevated temperatures*.

##### 1.3 Definitions and designations

###### 1.3.1 Definitions

For the purposes of this part of ISO 7005, the definitions of nominal size (DN) as given in ISO 6708, and nominal pressure (PN) as given in ISO 7268, apply.

NOTE — In this part of ISO 7005, nominal pressure is designated by the letters "ISO PN" followed by the appropriate reference number.

\* Series 1 ratings are the basic ratings; series 2 ratings have limited application.

### 1.3.2 Designation of types and facings

Figure 1 illustrates flanges identified according to type.

05 — Blank flange

11 — Welding neck flange

12 — Hubbed slip-on flange for welding

13 — Hubbed threaded flange

14 — Hubbed socket welding flange

15 — Loose hubbed flange for lapped pipe end

21 — Integral flange

Figure 2 illustrates facing types (type A and type B) which are used where applicable in conjunction with flanges shown in figure 1.

Botop Steel

## Section 2: General requirements

### 2.1 Pressure/temperature ( $p/T$ ) ratings

#### 2.1.1 General

The pressure/temperature ratings of the flanges manufactured from the materials specified in table 14 shall be the maximum allowable non-shock working pressures at the temperatures given in tables 15 (grey cast iron), 16 and 17 (ductile cast iron) and 18 (malleable cast iron). Linear interpolation is permitted for intermediate temperatures.

**NOTE** — The rating of a flange is not necessarily the rating of the whole pipework system.

#### 2.1.2 Rating of flanged joints

Where two flanges in a flanged joint do not have the same pressure/temperature rating, the rating of the joint at any temperature shall not exceed the lower of the two flange ratings at that temperature.

#### NOTES

- 1 The temperature shown for a corresponding pressure rating is considered to be the same as that of the contained fluid. Use of a pressure rating corresponding to a temperature other than that of the contained fluid is the responsibility of the user, subject to the requirements of any applicable code or regulation.
- 2 Application of the ratings given in this part of ISO 7005 to flange joints should take into consideration the risk of leakage due to forces and moments developed in the connecting pipework.
- 3 Owing to the nature of any thread sealant used, additional limitations may be placed on a threaded flange.
- 4 These notes on service considerations are not intended to be exhaustive.

### 2.2 Materials

#### 2.2.1 Range of materials

Flanges shall be manufactured from the materials specified in table 14.

#### NOTES

- 1 It is the responsibility of each national standards organization to determine which are the national materials equivalent to materials specified in this part of ISO 7005.
- 2 Where there is an appropriate application standard, it is the responsibility of the purchaser to ensure compliance with the requirements of that standard.

#### 2.2.2 Gaskets

The various types, dimensions and materials used for gaskets are not within the scope of this part of ISO 7005.

#### 2.2.3 Bolting

#### NOTES

1 Bolting materials are not within the scope of this part of ISO 7005 but materials for bolting should be chosen by the user according to the pressure, flange material and the selected gasket so that the flanged joint remains tight under the expected operating conditions.

2 For joints comprising grey cast iron flanges with raised faces, and where grey cast iron flanges are bolted to flanges of other materials and either or both of the flanges have a raised face, it is recommended that bolting having a yield strength not exceeding 240 N/mm<sup>2</sup> should be used. If higher strength bolting is used, it is recommended that mating flanges should have flat faces and that full-face gaskets, which extend to the outside diameter of the flange, should be used.

### 2.3 Dimensions

#### 2.3.1 Range of nominal sizes

The range of nominal sizes applicable to each flange type and to each pressure rating shall be as specified in tables 2 to 4 as appropriate.

#### 2.3.2 Dimensional details

Dimensions of flanges shall be in accordance with the following tables, as appropriate :

- table 6 for ISO PN2,5 flanges
- table 7 for ISO PN6 flanges
- table 8 for ISO PN10 flanges
- table 9 for ISO PN16 flanges
- table 10 for ISO PN20 flanges
- table 11 for ISO PN25 flanges
- table 12 for ISO PN40 flanges
- table 13 for ISO PN50 flanges

**NOTE** — Tolerances on dimensions are not specified in this part of ISO 7005 but guidance on the dimensions which should have tolerances and suggested tolerances are given in annex A.

#### 2.3.3 Attachment of welded and threaded flanges

**NOTE** — Details of attachment for welded and threaded flanges are not specified in this part of ISO 7005.

### 2.4 Joint facings

#### 2.4.1 Types of facings

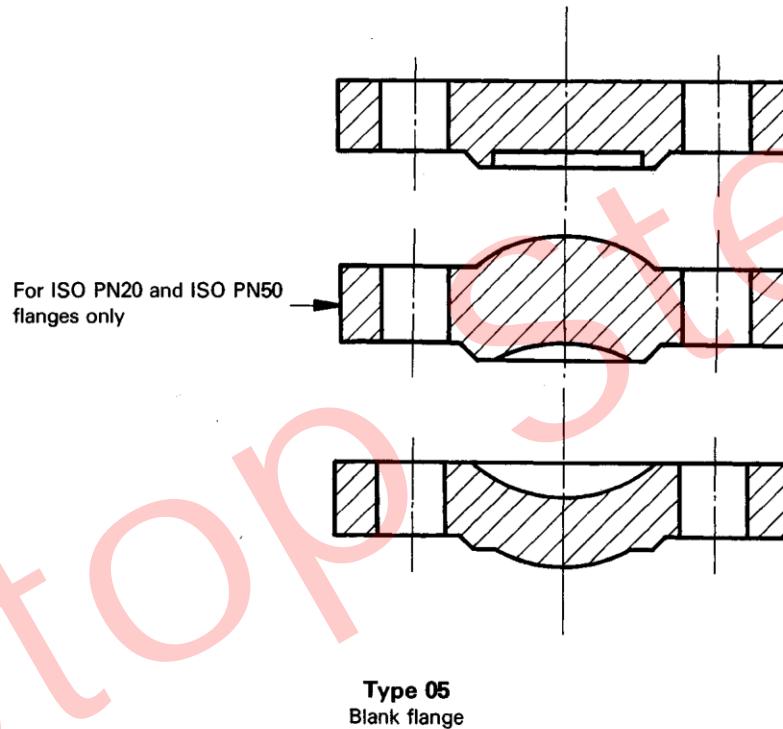

The flange facings specified (flat face type A and raised face type B) are illustrated in figure 2; their raised face dimensions shall be as given in table 5.

**NOTE** — The transition from the outside diameter of the raised face to the flange face is at the option of the manufacturer (i.e. either a radius or a chamfer may be used).

Botop Steel

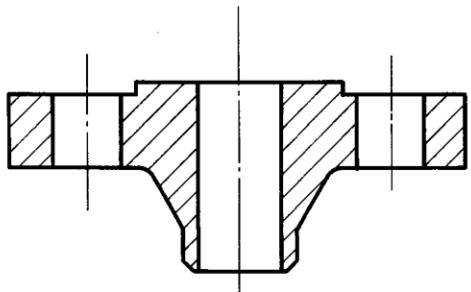

<https://www.botopsteelpipe.com>

- b) nominal size — DN followed by the appropriate number (see 2.3.1);
- c) nominal pressure — ISO PN followed by the appropriate number (see 1.1);
- d) flange type number (see 1.3.2 and figure 1);
- e) facing type letter (see 1.3.2 and figure 2);
- f) material designation (see 2.2.1);
- g) for flange types 11, 12, 14 and 15, the external diameter and thickness of pipe to which the flange is to be attached (see note 3 to tables 6 to 13) when supplied loose, i.e. not as a component of some other fitting;
- h) type of thread for threaded flanges (type 13) when supplied loose, i.e. not as a component of some other fitting.

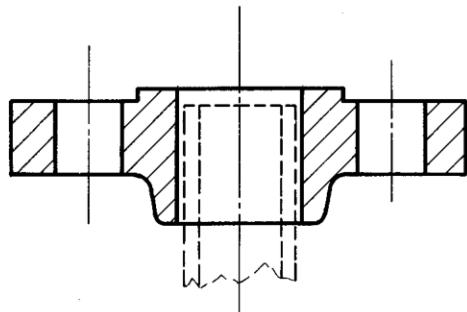

NOTE — See the note to 2.4.1 regarding the transition from the outside diameter of the raised face.

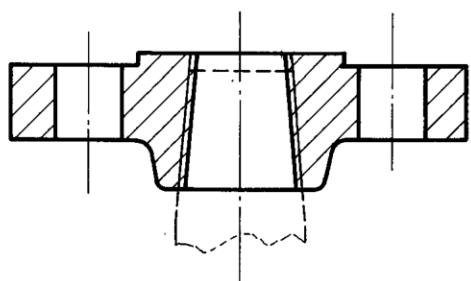

**Figure 1 — Types of flanges**

1) See table 14 for an explanation of the abbreviated cast iron designations.

2) For ductile iron pipes and fittings to ISO 2631 the outside diameters for the following flanges shall be:

- for DN 250, D = 400 mm;
- for DN 300, D = 455 mm.

This diagram illustrates the arrangement but not necessarily the correct number of bolt holes.  
Refer to the column "number of bolts" in table 9 for the actual number.

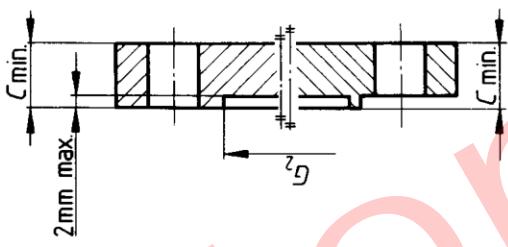

NOTE — For facing dimensions, see table 5.

Botop Steel

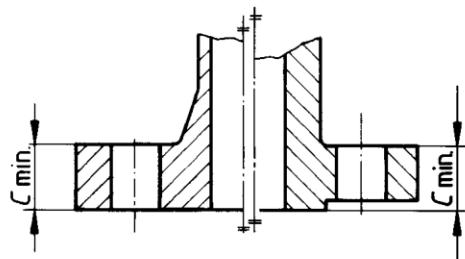

<https://www.botopsteelpipe.com>

Type 05

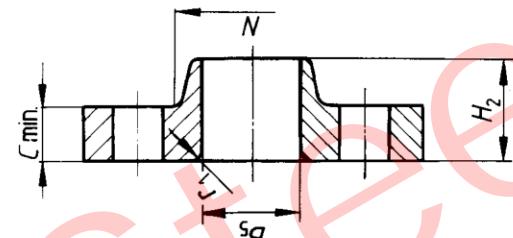

Grey cast iron blank flanges are supplied flat up to DN 250 and dished or domed for DN 300 and greater. Ductile cast iron blank flanges are supplied flat up to DN 250 and optionally flat, dished or domed for DN 300 and greater. The raised face is permitted to be on either the concave or the convex side of dished blank flanges.

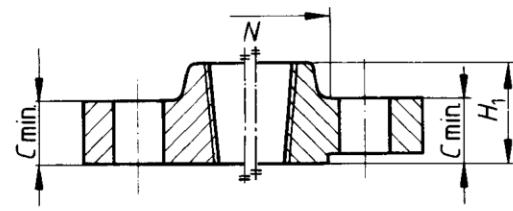

Type 21

Type 15

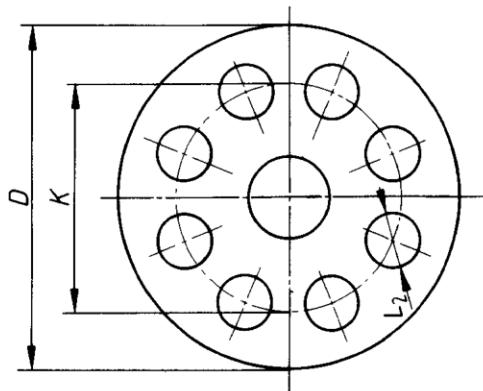

Type 13

This diagram illustrates the arrangement but not necessarily the correct number of bolt holes.

Refer to the column "number of bolts" in table 10 for the actual number.

NOTE — For facing dimensions, see table 5.

750	1 095	997	48	28	M45	76,2				13	15

1) See table 14 for an explanation of the abbreviated cast iron designations.

2) For type 05 and type 21 grey cast iron flanges only.

**Notes to tables 6 to 13**

- 1 All ISO PNs: For dimensions  $d_1$  and  $f_1$ , see table 5.
- 2 ISO PN2,5, ISO PN6, ISO PN10, ISO PN16, ISO PN25 and ISO PN40: The ductile, grey and malleable cast iron flange thicknesses specified are:  
 $C_5$ , grey cast iron thicknesses to DIN 2530, DIN 2531, DIN 2532, DIN 2533, DIN 2534 and DIN 2535;  
 $C_7$ , ductile cast iron thicknesses to ISO 2531;  
 $C_8$ , malleable cast iron thicknesses equal to  $C_3$  dimension for steel type 21 flanges given in ISO 7005-1.
- 3 Pipe dimensions affect the bore of the flange, and the external diameter and thickness of pipe which is to be joined to the flange should be specified where appropriate. The bore sizes of integral (type 21) flanges on valves and fittings to which they form a part may be given in the appropriate standard for the component.
- 4 For bolts to ISO 261 used in conjunction with ISO PN20 and ISO PN50 flanges:
  - for sizes up to and including M45, use metric coarse series;
  - for sizes M48 and above, use a constant 4 mm pitch.

## Section 4 : Materials and pressure/temperature ( $p/T$ ) ratings

### 4.1 Materials

1) 1 bar = 0,1 MPa

**Annex A**  
**(informative)**

**Guidance on tolerances on dimensions**

This annex lists dimensions which should be given a tolerance and also gives suggested tolerances.

NOTE — ISO/TC 5/SC 10 Working Group 6 has been instructed to prepare a table of tolerances which become mandatory by revision or by amendment to this part of ISO 7005.

Botop Steel

Table A.1 – Tolerances on dimensions

Dimensions for all types		Dimensions and tolerances in millimetres																								
Symbol	Designation	DN																								
<i>D</i>	Outside diameter	Not specified but the minimum shall provide a sufficient bearing area for the nut- or bolt-head																								
<i>d</i> <sub>1</sub>	Facing diameter	+4,5 -4	+5,5 -4,5	+6,5 -5	+8,5 -5,5	+10 -6																				
<i>f</i> <sub>1</sub>	Facing height	<table border="1"> <thead> <tr> <th colspan="3">Height</th> </tr> <tr> <th>2</th> <th>3</th> <th>4</th> <th>5</th> <th>6</th> </tr> </thead> <tbody> <tr> <td>+1 -1</td> <td>+1,5 -2</td> <td>+2 -3</td> <td>+2,5 -4</td> <td>+3 -5</td> </tr> </tbody> </table>												Height			2	3	4	5	6	+1 -1	+1,5 -2	+2 -3	+2,5 -4	+3 -5
Height																										
2	3	4	5	6																						
+1 -1	+1,5 -2	+2 -3	+2,5 -4	+3 -5																						
<i>b</i> <sup>1)</sup>	Flange thickness at edge	<table border="1"> <thead> <tr> <th colspan="3">Thickness</th> </tr> <tr> <th>&lt; 25</th> <th>26 to 40</th> <th>41 to 55</th> <th>56 to 70</th> <th>&gt; 71</th> </tr> </thead> <tbody> <tr> <td>± 4</td> <td>± 4,5</td> <td>± 5</td> <td>± 6</td> <td>± 7</td> </tr> </tbody> </table>												Thickness			< 25	26 to 40	41 to 55	56 to 70	> 71	± 4	± 4,5	± 5	± 6	± 7
Thickness																										
< 25	26 to 40	41 to 55	56 to 70	> 71																						
± 4	± 4,5	± 5	± 6	± 7																						
<i>L</i> <sub>2</sub>	Diameter of bolt holes	<table border="1"> <thead> <tr> <th colspan="3">Diameter of bolt holes</th> </tr> <tr> <th>&lt; 20</th> <th>&gt; 22</th> <td></td> </tr> </thead> <tbody> <tr> <td>+0,5 0</td> <td>+1 0</td> <td></td> </tr> </tbody> </table>												Diameter of bolt holes			< 20	> 22		+0,5 0	+1 0					
Diameter of bolt holes																										
< 20	> 22																									
+0,5 0	+1 0																									
<i>K</i>	Diameter of bolt circle	<table border="1"> <thead> <tr> <th colspan="3">Diameter of bolt circle for bolt size</th> </tr> <tr> <th>M10</th> <th>M12 to M24</th> <th>M27 to M45</th> <th>M52</th> <th>&gt; M56</th> </tr> </thead> <tbody> <tr> <td>± 1</td> <td>± 1,5</td> <td>± 2</td> <td>± 3</td> <td>± 3,5</td> </tr> </tbody> </table>												Diameter of bolt circle for bolt size			M10	M12 to M24	M27 to M45	M52	> M56	± 1	± 1,5	± 2	± 3	± 3,5
Diameter of bolt circle for bolt size																										
M10	M12 to M24	M27 to M45	M52	> M56																						
± 1	± 1,5	± 2	± 3	± 3,5																						
–	Centre to centre of adjacent bolt holes	<table border="1"> <thead> <tr> <th colspan="3">Centre to centre for bolt size</th> </tr> <tr> <th>M10</th> <th>M12 to M24</th> <th>M27 to M45</th> <th>M52</th> <th>&gt; M56</th> </tr> </thead> <tbody> <tr> <td>± 0,5</td> <td>± 0,75</td> <td>± 1</td> <td>± 1,5</td> <td>± 1,75</td> </tr> </tbody> </table>												Centre to centre for bolt size			M10	M12 to M24	M27 to M45	M52	> M56	± 0,5	± 0,75	± 1	± 1,5	± 1,75
Centre to centre for bolt size																										
M10	M12 to M24	M27 to M45	M52	> M56																						
± 0,5	± 0,75	± 1	± 1,5	± 1,75																						
–	Parallelism of bolting surface with joint surface	2° max.																								

1)  $b = c - f_1$
